

About

Wetula Platform

"Chief driver of the quantum leap in farm performance.

Mission statement

Our mission is to have integrable hard & softwares that provide simplified small holder friendly precision agriculture technologies for the various actors in the various agriculture value chains.

Our Vision

To drive a quantum leap in farm performance, farmer life improvements and inclusive end-to-end solutions in not only cocoa, but along the major agriculture value chains globally.

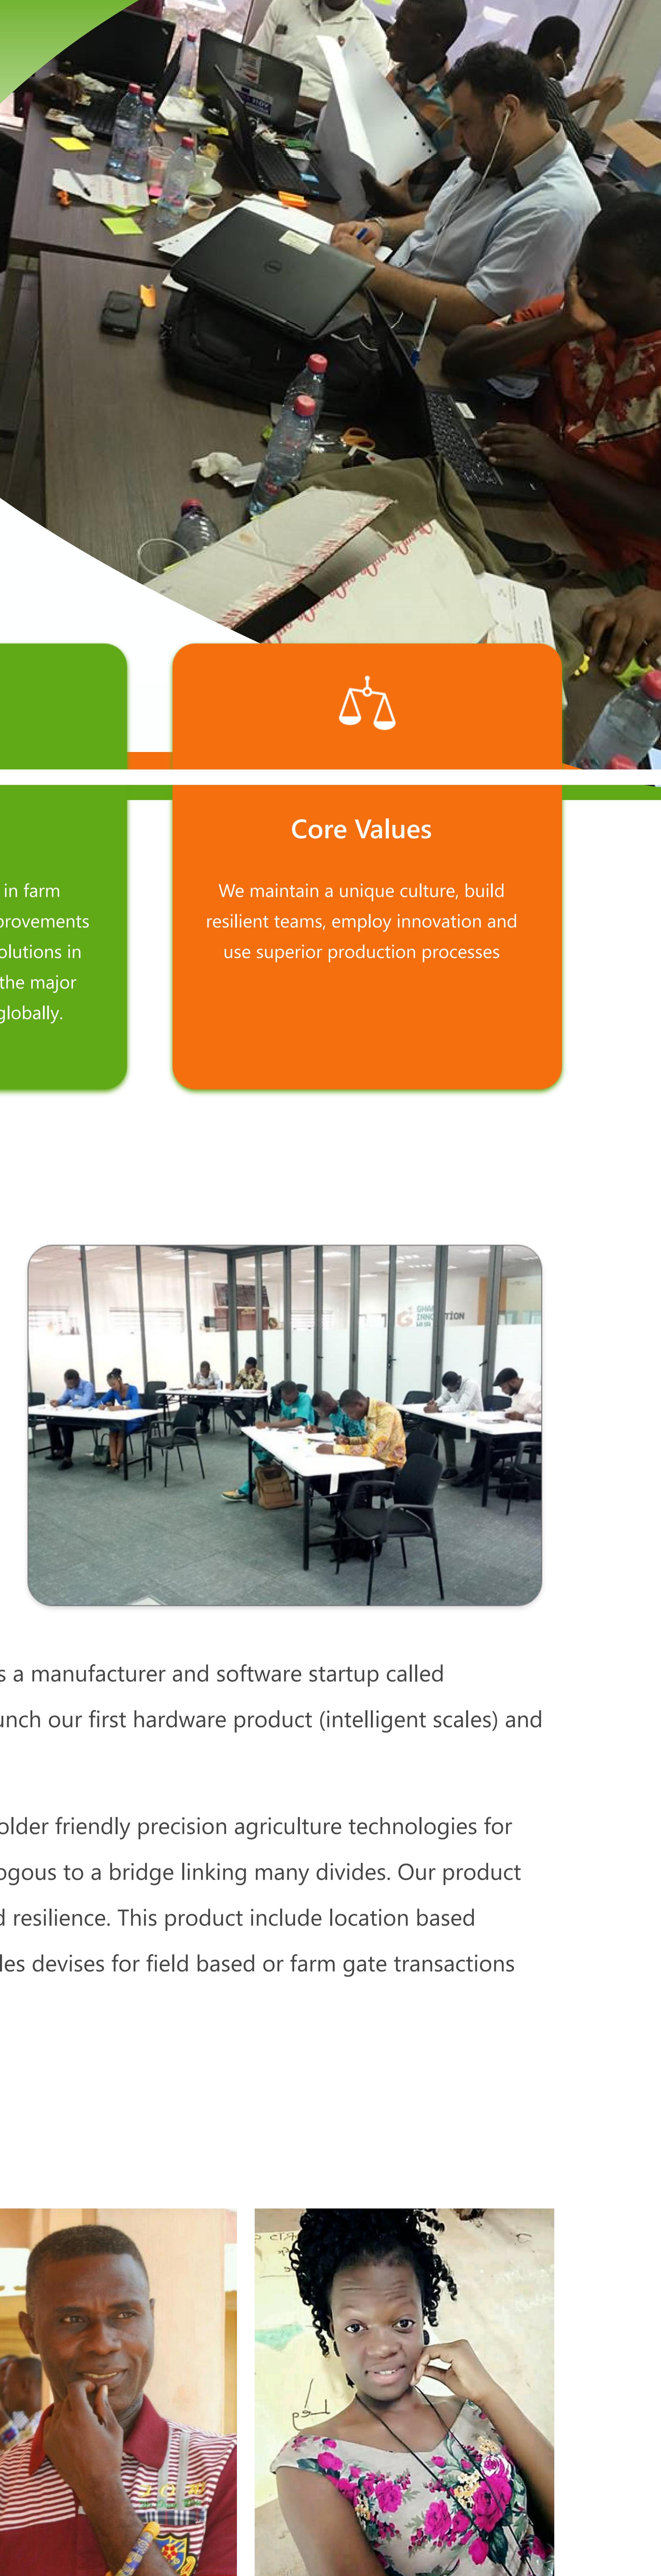

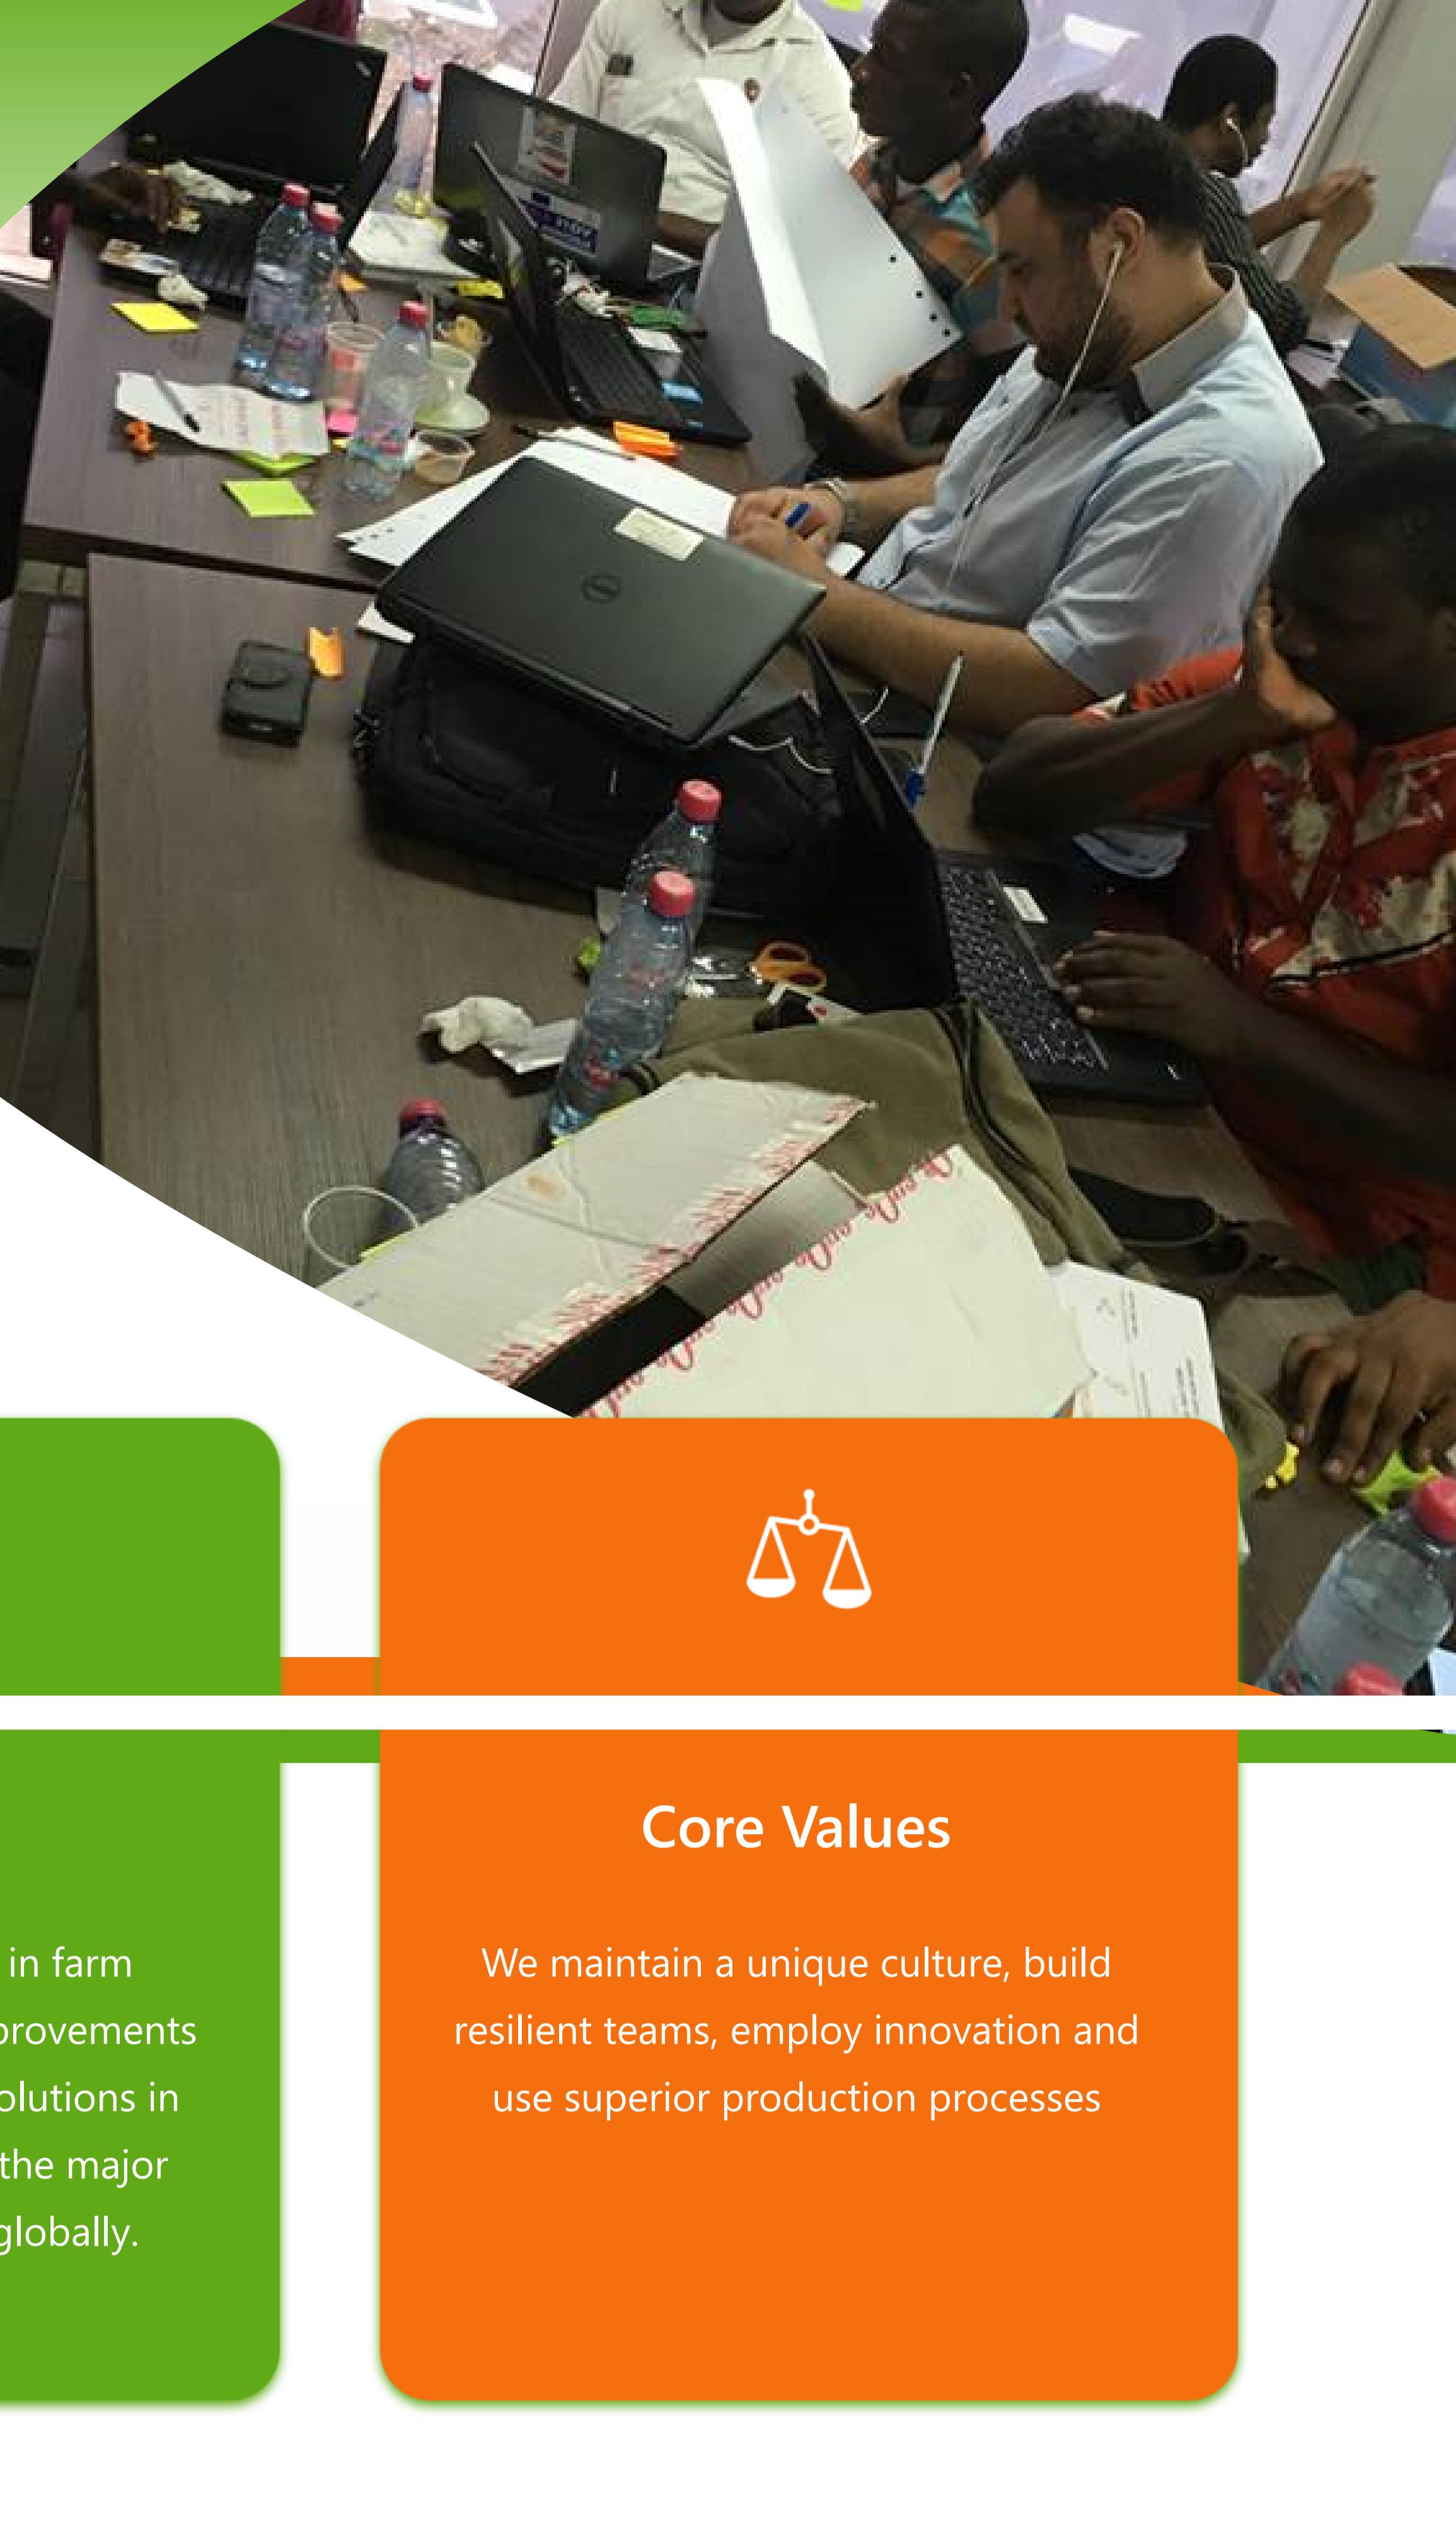

Core Values

We maintain a unique culture, build resilient teams, employ innovation and use superior production processes

COMPANY OVERVIEW

There has been a winding journey of learning and evolution. Well before we built our product and a company, there were a number of events that altogether helped put us into shape.

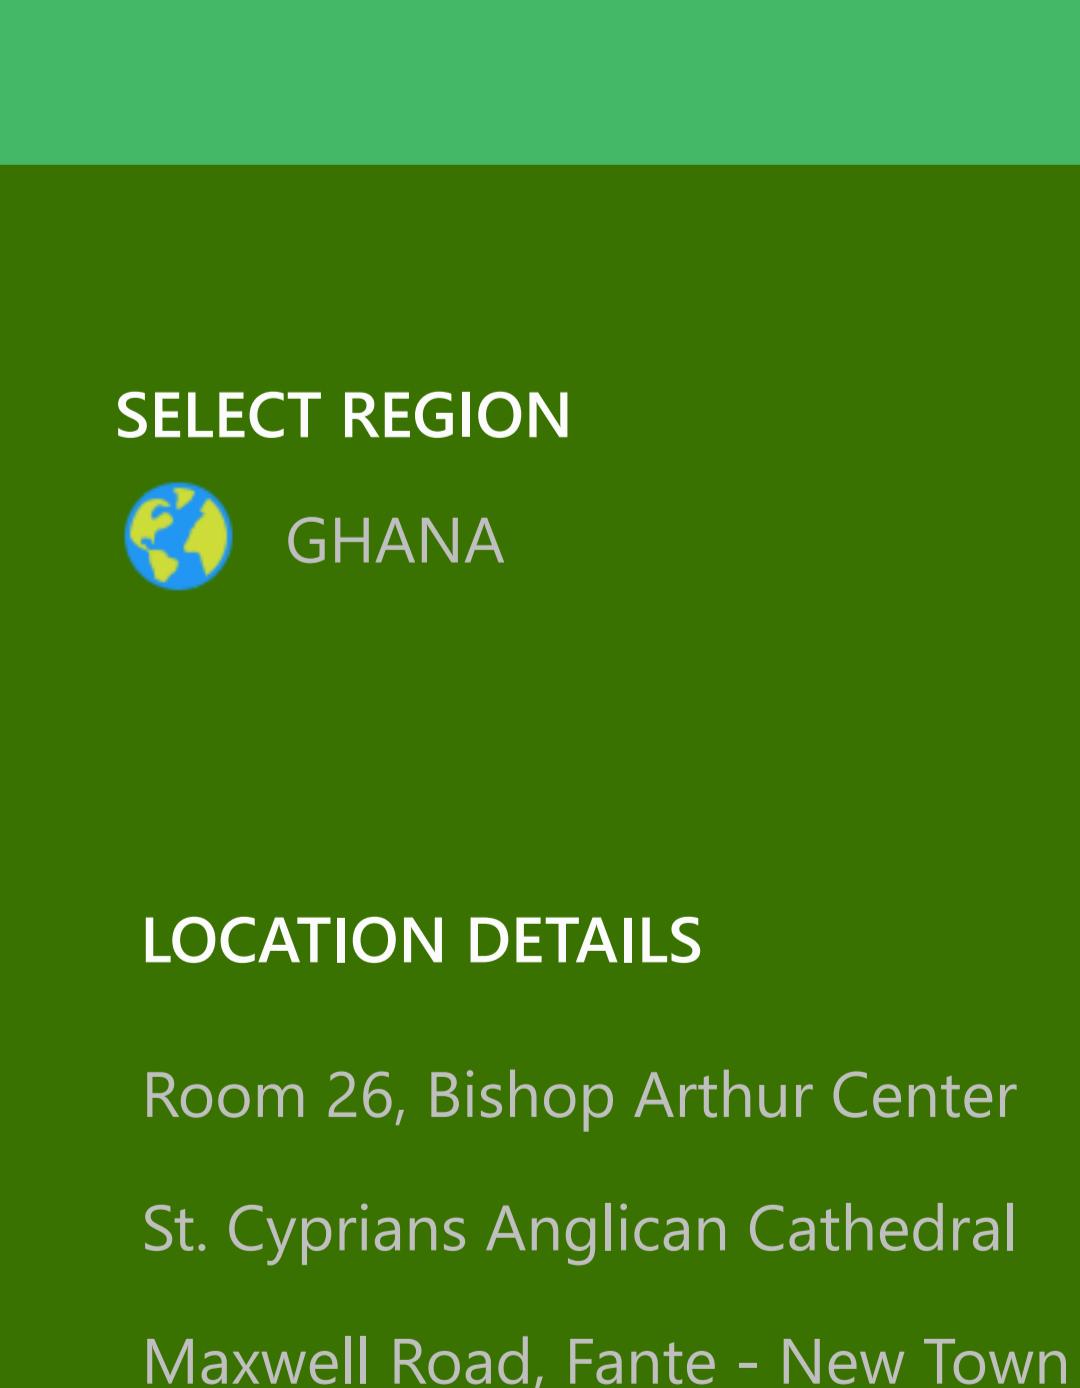

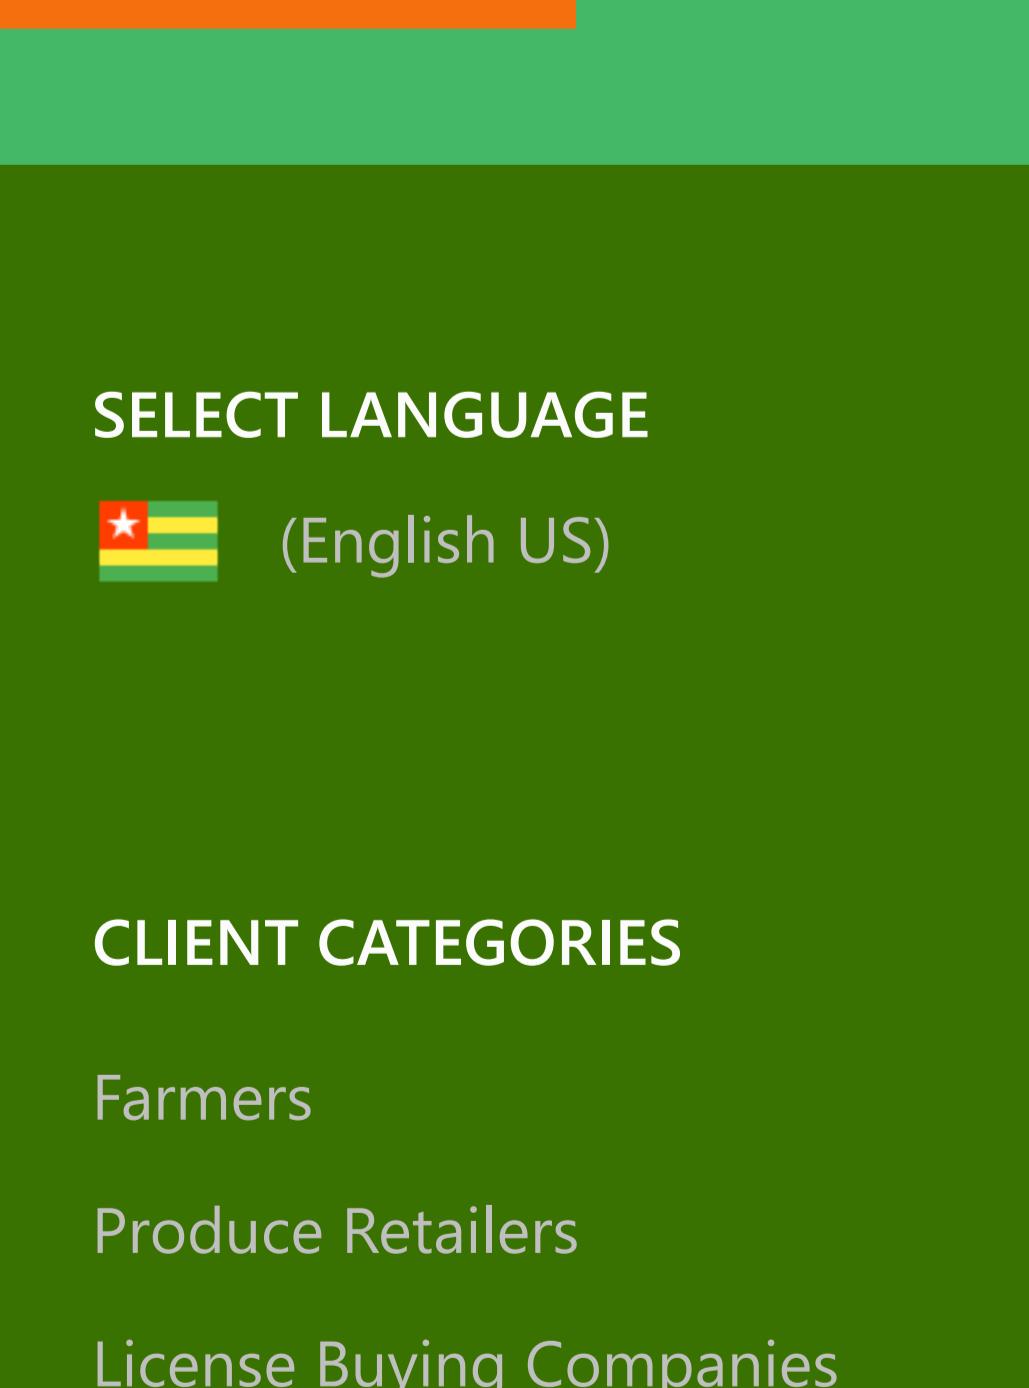

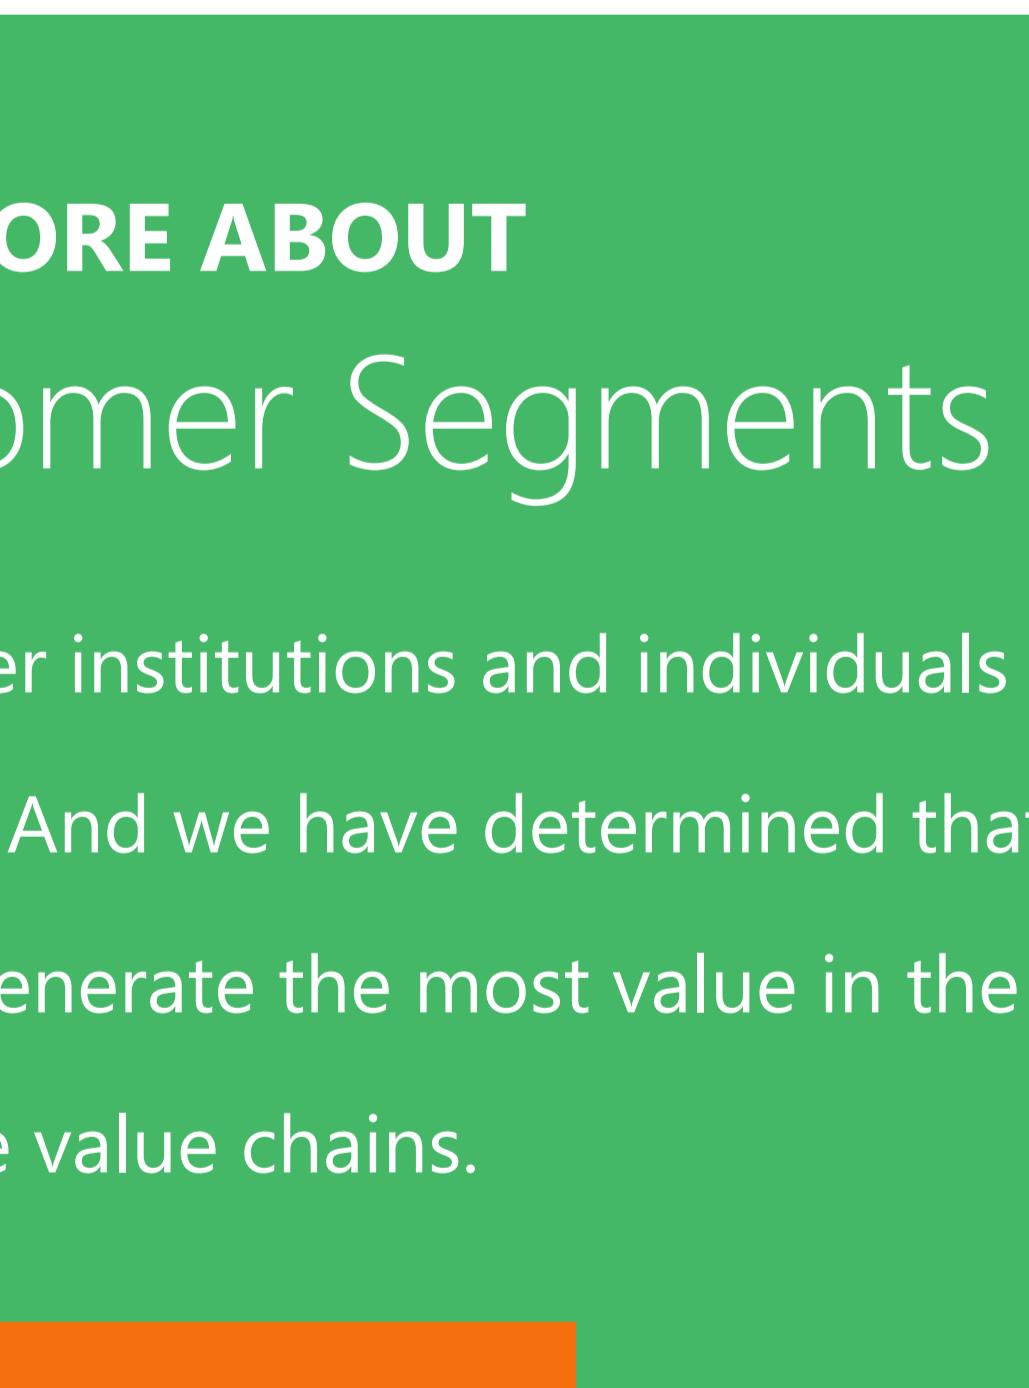

Apart from the many years of industry practice, one very crucial such momentum originated with our participation in the 2017 Chocothon event at the Impact Hub in Accra and the Golden Bean Hotel in Kumasi.

Following from the chocothon events, our efforts materialized both as a manufacturer and software startup called Farmbridge Systems. Farmbridge Systems is currently preparing to launch our first hardware product (intelligent scales) and the software platform <https://www.wetula.com> commercially in 2018

We build integrable hard & soft wares that provide simplified small holder friendly precision agriculture technologies for various actors in various agriculture value chains. Our concept is analogous to a bridge linking many divides. Our product portfolio are tailored to actively increase productivity, profitability and resilience. This product include location based installable small holder precision farm management tools, point of sales devises for field based or farm gate transactions and information management platforms.

THE TEAM

LEARN MORE ABOUT

Our Customer Segments

Whilst we will be working with farmers and other stakeholder institutions and individuals in the agricultural sector, we have analyzed the various small holder agriculture value chains. And we have determined that, of the 500 million small holder households in Africa, our innovative technology would generate the most value in the loose and or tight commercial agriculture value chains.
